Two objectives: only g_1 varies, g_2 is Ackley throughout
Composite wins in every condition
hypervolume gained by Composite
(absolute, shared reference point)
0.71
1.07
1.23
0.97
z (linear)
$\sinh z$ (bijective)
z^3 (bijective)
z^2 (NOT bijective)
per run (32 each)
the information step is a coin flip
change in hypervolume gained
22/32 runs
16/32 runs
21/32 runs
misspecification $z \to \sinh$
information $\sinh \to z^2$
both $z \to z^2$
