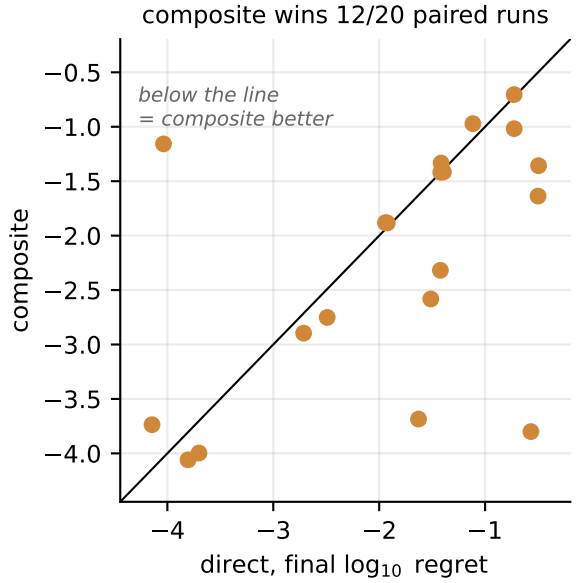
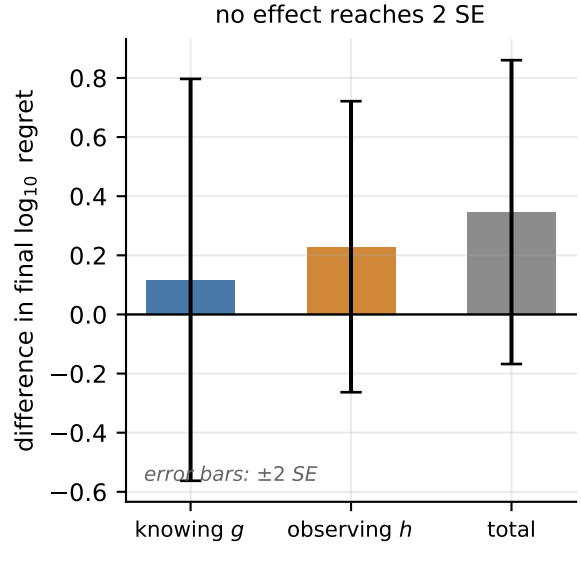
Models 2 and 3 coincide exactly
Model 3 (knows g, sees y)
Model 2 (sees h)
Model 1 (GP on y, MLE)
sup|M2 − M3| = 0.000000
sup|M1 − M3| = 0.070 (MLE only)
P(y(x) ≤ a | ·)
a



composite wins 12/20 paired runs
below the line
= composite better
composite
direct, final log10 regret



no effect reaches 2 SE
difference in final log10 regret
error bars: ±2 SE
knowing g
observing h
